

Water Safety Scotland Environmental Statement

Water Safety Scotland is committed to a sustainable future. We are fully behind the Scottish Governments vision that “by 2032, Scotland will have reduced its emissions by 66%, relative to the baseline, while growing the economy, increasing the wellbeing of the people of Scotland and protecting and enhancing our natural environment.”

We are working towards a healthier and safer society and want to play our part in helping Scotland have a sustainable future.

We will:

- Comply with all relevant environmental legislation and regulations
- Minimise any waste through the waste hierarchy: eliminate, reduce, reuse, recycle or recover
- Ensure the use of eco-friendly, reusable or biodegradable products
- Encourage member organisations to adopt an Environmental Policy Statement
- Encourage increased vegan and vegetarian options at meetings and events
